

Classroom computer upgrades

The large tower Macintosh computers in classrooms have been replaced with more modern and compact Macintosh Mini computers. You will find the new computers in the rack at the bottom of the stack of equipment in the black case as shown below.

They will operate almost exactly like the old computers with a couple differences.

- 1) You can plug in your USB devices (thumb drives, etc) into either of the USB ports on the front of the black case.
- 2) CDs/DVDs can be slid into the slot on the left of the black case. They will not go into the slot on the right.
- 3) Use the power button on the right side of the black case to turn the computer on (if it is not already powered on).
